Pigment Dispersions for Epoxy Coatings

The EDC Series colorants have been formulated for use in epoxy coatings. These colorants are formulated with epoxy resin and diluent to have improved handling properties. The rheology of these colorants tends to be somewhat viscous, but lower than straight epoxy systems.

► Key Benefits

The EDC Series pigment dispersions for epoxy applications consist of organic and inorganic pigments milled in a bisphenol A epoxy resin with a diluent commonly used in epoxy systems. The dispersing resin and diluent used in each colorant formulation was chosen to ensure broad compatibility in most epoxy coatings.

Straight epoxy system tend to be viscous. The incorporation of a glycidyl ether to the color formulations allow for lower viscosity products. The level of the diluent is kept below a level where excessive diluent can cause color control issues. A balance between lower viscosity and colorant performance has been achieved with the EDC Series colorants.

These colorants are also formulated at maximum pigment loading to limit the colorant's effects on final coating's properties. The formulation of each colorant within the series was developed to ensure the stability and handling properties were maintained. As with most epoxies, some thickening of the colorants can be expected over time.

► Properties

The EDC Series colorants offer the coatings formulator a product line with low VOC levels, excellent pigment development, and good performance characteristics. The tint strength of these colorants is controlled by weight to +/- 10%. Color difference is also controlled to ensure lot-to-lot consistency.

The epoxide equivalent weight will be approximately 220. Typical curing agents are aliphatic amines, cycloaliphatic amines, polyamides, amindoamines, aromatic amines, and anhydrides.

► Applications

The EDC Series is formulated for use in epoxy industrial coatings including, but not limited to, automotive, coil, concrete protective, industrial maintenance, marine, metal containers, pipe, and other high performance protective coatings.

► Compatibility

The EDC Series colorants are compatible with most epoxy coating systems. They are also compatible with epoxy coatings formulated with diluent. However, increasing levels of diluent in the coating may lead to color control issues (flocculation, color float).

► Shelf Life

Proper handling is essential to maintain good quality. It is recommended that the colorants be mixed prior to use. Containers should be tightly sealed when not in use.

The shelf life on the EDC Series colorants in unopened containers is 2 year from the date of manufacture.
